Building a Simple Webpage with HTML & CSS

1. Project Structure

Create two files in a folder:

```
skincare/  
  index.html  
  style.css
```

2. HTML — index.html

Basic Structure

Every webpage starts with this skeleton:

```
<!DOCTYPE html>  
<html lang='en'>  
  <head>  
    <meta charset='UTF-8'>  
    <meta name='viewport' content='width=device-width, initial-scale=1.0'>  
    <title>GlowUp Skincare</title>  
    <link rel='stylesheet' href='style.css'>  
  </head>  
  <body>  
    <!-- content goes here -->  
  </body>  
</html>
```

■ meta viewport makes the page mobile-friendly.

Navigation Bar

```
<nav class='navbar'>  
  <div class='logo'>■ GlowUp</div>  
  <ul class='nav-links'>  
    <li><a href='#home'>Home</a></li>  
    <li><a href='#products'>Products</a></li>  
    <li><a href='#routine'>Routine</a></li>  
    <li><a href='#contact'>Contact</a></li>  
  </ul>  
</nav>
```

<section class='hero' id='home'>
